

## History of Water Use

### Gallons Per Capita Per Day (GCPD)

GCPD is the total average daily amount of water diverted or pumped for treatment for potable use by a public water supply system. The calculation is made by dividing the water diverted or pumped for treatment for potable use by population served. Indirect reuse volumes shall be credited against total diversion volumes for the purpose of calculating gallons per capita per day for targets and goals.

<u>2005 to 2020 Average GCPD</u>			<u>10-year Average</u>		<u>5-Year Average</u>	
2020	201		2011-2020	189	2016-2020	182
